

## ABSTRACT OF THE DISCLOSURE

A recording apparatus for recording movie content onto a DVD is provided. The movie content is encrypted using a different encryption method depending on whether the DVD is intended for consumer use or industrial use. If the DVD is for consumer use, a VIDEO\_TS directory is created on the DVD, and the encrypted movie content is recorded in the VIDEO\_TS directory. If the DVD is for industrial use, a VIDEO\_TS directory and an EWCPS\_TS directory are created on the DVD, and the encrypted movie content and message data are recorded respectively in the EWCPS\_TS directory and the VIDEO\_TS directory. The message data indicates that the movie content cannot be played back by consumer DVD players.
